Skills

Laravel

PHP (OOP,MVC)

Git

MySQL

Docker

Linux (CLI, development environment)

CSS

HTML

English (A2-A1)

Backend Developer with Laravel and hands-on experience in building scalable APIs and modular architectures. Familiar with implementing asynchronous systems using Queues and Jobs, managing events and notifications, and designing extensible application structures. Experienced in developing real-world projects, including e-commerce platforms and service-oriented systems, with a strong focus on Clean Code principles and Laravel best practices. Interested in problem-solving, improving code quality, and continuously learning new technologies.

Projects

milipay - laravel payment package

Aban 1404

A reusable Laravel package for simplifying payment integration.

Designed a modular and extensible Laravel package architecture

Implemented reusable services for payment workflows

Provided clean APIs with focus on configurability and maintainability

Followed Laravel package development best practices

Link: https://github.com/milirezai/milipay

project management system (REST API)

Azar 1404

Backend development of a project management system built as a RESTful API.

Built RESTful APIs with Laravel and modular architecture

Implemented event-driven flows using Events, Listeners, Queues, and Jobs

Designed centralized error handling, API Resources, and caching

Implemented authentication, authorization, and role-based access control
